## Experience

Research on the interpretability of Transformers when trained on Dyck Grammar 02/2023 - 05/2023Core group member, Supervised by Andrej Risteski, CMU

- Investigate the loss landscape of 2-layer Transformers when trained on GPT task on bounded depth Dyck Grammar.
- Exhibit a variety of "uninterpretable" attention patterns that can perfectly generate Dyck through theoretical calculation and empirical validations.

### Research on the limiting dynamics of Sharpness Aware Minimization

06/2022 - 09/2022

Core group member, Supervised by Zhiyuan Li and Tengyu Ma, Stanford

- Investigate the limiting flow of Sharpness Aware Minimization when the learning rate and perturbation radius converges to 0 under the assumption that global minimizers form a Riemannian manifold
- Provably show different implicit bias for Sharpness Aware Minimization in full-batch and stochastic settings

• Show the necessity of the stop gradient step by proving that without which the method will have a different bias

## Research on understanding soft prompt tuning via neuron activation

08/2021 - 04/2022

Core group member, Supervised by Xiaozhi Wang and Zhiyuan Liu, Tsinghua NLP Lab

- Discover highly predictive neurons in pretrained language model which consistently emerges in prompt tuning
- Show the importance of these neurons to the performance under various ways of parameter-efficient tuning

# Skills

Languages: Familiar with Python and has written C++, R, Matlab, Bash

Maths: Familiar with mathematics analysis, measure theory, linear algebra, abstract algebra, probability theory, statistics, causal inference, and discrete mathematics

Leadership: Class monitor of Yao Class from 2021 to 2024, vice president of the IIIS Student Union from 2023 to 2024

Miscellaneous: Chinese debating (PB: rank 2 school-wide), science fiction novel writing
